despite examples of vocational guidance practice being evident in australia since the mid 1800s there remains a spasmodic and patchwork approach to practice across the country for decades it is a field which has been paradoxically boosted and challenged by changing economic and political agendas repeated international national and state reviews emphasise the vital nature of a systemic national approach to career development however authors repeatedly lament the lack of a sustained focus on career activity as a major national priority there is no broad comprehensive historical reckoning of the history of career development theory and practice in australia since this early period career development theory and practice in australia has been forged in partnership with developments in an international context in documenting the shared history with other countries the author significantly adds to the body of knowledge on career development as a field in australia and internationally the book provides new understandings about the historical development of this field of knowledge and in particular the challenging and cyclical nature of its policy history

traditionally developmental psychology has its focus on individuals developmentalists aim to describe regularities in individuals change and development across time to explain the processes and mechanisms that are involved in producing change and regularity and eventually to design strategies for optimization and modification of developmental pathways although the role of contexts has always been of central concern for these purposes it is nevertheless quite surprising to note that compared to the effort devoted to individuals relatively little attention has been paid to the study of the nature and organization of their contexts this volume is an exploration of the idea that how we describe and explain human development will be closely tied to our understanding of what contexts are how individuals and contexts become influential for one another what contexts do to and with individuals and how contexts and their influences change themselves across time a major theme is whether the traditional dichotomy between individuals and their contexts may be artificial perhaps culturally biased and after psychologists have adhered to it for about a century may have become an impediment to increasing our understanding of developmental processes with this volume the editors contribute a serious consideration of development and systematic change to emerging models of person context relations and provide suggestions about how it may be possible to incorporate these notions in developmental
